Enjoy the Beauty and Warmth of ‘Vintage Style’ Lantern and Lamp Lighting . . . With or Without Oil!

CUSTOMER SATISFACTION IS ALWAYS OUR TOP PRIORITY!

Vintage Style Oil & Electric Lanterns and Lamps

BigRockLanterns.com US & Canada: 800-405-5190
International: 770-866-5857
WE ARE ABSOLUTELY CRAZY ABOUT LAMP & LANTERN LIGHTING!
Big Rock Lanterns, Ltd. (A NC Corporation) is situated in the foothills of the Great Smokey Mountains in Murphy, NC. We offer one of the largest, most distinctive collections of lanterns (kerosene and electric) and lamps (oil and electric), in a wide range of styles, colors and custom finishes.

Our custom lighting is skillfully created by craftsmen with over 30 years of experience, resulting in products that not only appear unaltered, but historically correct. You may have already seen some of our beautiful lighting in restaurants, the movies or some of our many theme parks throughout the country or abroad.

**Most of what we offer is custom made on a 'Made-to-Order' basis.** Meaning, they are custom made to your specifications. You select the type of fixture (table, wall or ceiling fixture, etc.), lantern or lamp model, custom color and/or finish and any available options and upgrades. Many of our electric lantern fixtures can be upgraded for use in 'damp' (protected by a porch, or similar) or 'wet' (subject to rain or sprinklers) applications. Wet location use may require low voltage wiring.

All of our electric lanterns and lamps meet, or exceed UL standards for electrical safety. All fixtures are offered in both UL/CE and O.E.M. versions.

**PARTS & ACCESSORIES:** In addition to lanterns and lamps, we carry the accessories and replacement parts, including globes & chimneys, which we do not include in this catalogue. We also maintain a sizeable inventory of old stock replacement lantern parts and globes for Dietz, Adlake, Handlan, C.T. Ham, Embury, Paull's Leader, Regal and several other lantern manufacturers. If there is something special that you are looking for just give us a call.

Vintage Style Oil & Electric Lanterns & Lamps

BigRockLanterns.com  US & Canada: 800-405-5190
International: 770-866-5857
**‘Premium’ Grade Hooded Kerosene Lanterns**

**Champion Post Reflector Lantern**

The Champion Post Reflector Lantern is perfect for applications where electricity is either not available or prohibited. The 12” Hooded Reflector is pitched to redirect all of the light normally cast upward and eliminate all shadow beneath the lantern. Square or round post sizes available.

**SPECIFICATIONS:**
- Champion Lantern
  - Overall Height 20-1/2"
  - 12” Dia. Reflector
  - Wicked and ready to add oil
  - Black or Bright Galvanized Finish

**TEMPORARY ELECTRIC ADAPTERS**

Our temporary electric adapters can be used with your lantern (with wing-lock cone burners only) without drilling or modifying the lantern. Simply empty the tank, removing the kerosene and burner and replace it with the electric burner. To use the lantern with oil, replace the original kerosene burner and fuel.

**SPECIFICATIONS:**
- Adapter with In-Line On-Off $29.95
- Adapter with In-Line Lo-Hi-Off $32.95

---

**HOODED REFLECTOR LANTERNS**

Our premium grade Hooded Reflector Lanterns are designed for use directly over any area that needs extra light, such as a table or desk. The hooded reflectors are pitched to focus the light normally cast upwards directly under the lantern with no shadow. Authentic to the original patterns from the late 1800’s, each of our hooded reflectors are constructed by hand right here in the USA and are the perfect compliment to outfit your cabin or off-grid home.

**SPECIFICATIONS:**
- Little Champ Lantern
  - Overall Height 16-1/4” (Bail Up)
  - 10” Dia. Reflector
  - Wicked and ready to add oil
  - Black or Bright Galvanized Finish

- Champion Lantern
  - Overall Height 20-1/2"
  - 12” Dia. Reflector
  - Wicked and ready to add oil
  - Black or Bright Galvanized Finish

**No Drilling Required**

- Little Champ
- Champion
- Champion Post Reflector Lantern

---

**Our temporary electric adapters can be used with your lantern (with wing-lock cone burners only) without drilling or modifying the lantern. Simply empty the tank, removing the kerosene and burner and replace it with the electric burner. To use the lantern with oil, replace the original kerosene burner and fuel.**

**SPECIFICATIONS:**
- Adapter with In-Line On-Off $29.95
- Adapter with In-Line Lo-Hi-Off $32.95
‘Premium’ Grade Kerosene Lanterns

**Little Champ Kerosene Lantern**

The premium grade Little Champ features a full weight pressed globe and an improved Wing-Lock Burner with brass wick tube for unparalleled operation. The bright galvanized finish is reminiscent of the unpainted Dietz Junior lanterns made from 1902 to 1943. Especially appropriate for applications that demand both historic accuracy as well as durability and performance.

**SPECIFICATIONS:**
- 12” Height (Bail Up Height 16 1/4”)
- 5/8” Wick •Average 9 Candle Power
- 9 oz. Fount Capacity •12 Hour Burning Time
- Full Weight Pressed WTK Globe
- Optional Solid Color Amber, Blue, Green or Red Globes
- Includes Handy Funnel for oiling
- Wicked and ready to add oil
- Black or Bright Galvanized Finish
- Clear (Standard) or Colored (Optional) Globe

$25.95 w/Clear Globe  
$41.90 w/Colored Globe

**Little Giant Kerosene Lantern**

The premium grade Little Giant Lantern features an original style globe guard, improved Wing-Lock Burner and a full weight pressed "Loc-Nob” globe. The durable Bright Galvanized Steel version is highly rust resistant and reminiscent of the lanterns produced before 1943.

**SPECIFICATIONS:**
- 12” Height (Bail Up Height 16 1/4”)
- 5/8” Wick •Average 9 Candle Power
- 31 oz. Fount Capacity •40 Hour Burning Time
- Full Weight Pressed WTK #851 Globe
- Optional Solid Color Amber, Blue, Green or Red Globes
- Includes Handy Funnel for oiling
- Wicked and ready to add oil
- Available in Black, Bright Red, or Bright Galvanized Finish
- Clear (Standard ) or Colored (Optional) Globe

$29.95 w/Clear Globe  
$45.90 w/Colored Globe

**Party Lantern Sets**

Five festive Premium Grade Lanterns, perfect for use around the patio or BBQ. Your Choice of the Little Champ, Little Giant or Champion lanterns, with assorted globes (Amber, Blue, Green, Red and Clear).

Champion Lantern

Our Most Popular Lantern Model!

The Champion is the largest lantern in the Premium Grade Series, and also the most popular. This versatile and rugged model has exclusive features, including: An improved wing-lock burner with brass wick tube; Durable all galvanized construction; and a full-weight pressed “Loc-Nob” globe. The “Patio” version features a removable 1-7/8” post adapter and domed reflector. The Bright Galvanized Steel finish is reminiscent of the unpainted lanterns produced in the late 1800’s up to 1943, and is especially appropriate for applications that demand both historic accuracy as well as durability and performance.

SPECIFICATIONS:
- 15” Height (Bail Up Height 20 1/2”)
- 7/8” Wick, Average 12-14 Candle Power
- 31 oz. Fount Capacity, 27 Hour Burning Time
- Full Weight Pressed WTK Globe
- Clear Globe Standard
- Optional Solid Color Amber, Blue, Green or Red Globes
- Includes Handy Funnel for Oiling
- Wicked and Ready to Add Oil
- Champion Available in Black or Bright Galvanized Finish
- Patio Post Lantern Available in Galvanized Finish Only

Colored Globes - $15.95 Each

Champion Lantern Crate

These crates are hand constructed of pine and ash. Each crate features the WTK “Premium Grade” logo stamped into the end pieces. A great collectable and gift idea!!

SPECIFICATIONS:
- Approximately 9” x 9” x 18”
- Your Choice of Stain Color (Specify)

$29.00 Crate Only
$61.95 with Champion Lantern (Add $15.95 for Colored Globe)

Warming Plate

To answer the requests for a food or beverage warmer for use with the larger lanterns, we offer the Warming Plate for camping or emergency use. It simply snaps onto the lantern crown when needed and does not inhibit the normal operation of the lantern. Fits the WTK Champion, Dietz Blizzard, Dietz D-Lite, Dietz #2500 Jupiter as well as most larger Dietz #2 size lanterns made since 1898.

SPECIFICATIONS:
- Durable Zinc Finish
- Sturdy 2 pound capacity
- 4” Diameter Flat Surface for Mug or Bowl
Climax Station Lamp

Dietz first started making square station lamps back in 1840. The Climax model is authentic to the pattern from the 1890's.

- 18" High, 10-1/2" Wide, 8-1/2" Deep
- #2 Queen Anne Burner, 7/8" Wick
- Average 10 Candle Power
- 18 oz. Fount Capacity
- 15 Hour Burning Time
- Pearl Top Chimney

Frontier Post Lamp

The Frontier Lamps are patterned after the kerosene street lamps that were common in the USA from the late 1800's into the 1920's. They were used at railroad stations and platforms, army & cavalry bases, parks, courthouses and library entrances, to name just a few.

- 12-16 Candle Power Output
- Casts No Shadow
- 20+ Hour Burn Time per Tank
- Regulated & Filled From the Outside

Frontier Hanging Lamp

- Reflecter Diameter: 15"
- Post Lamp Height: 26"
- Hanging Lamp Height: 23” (Less bail)

Oil Version

- Black Finish - $359.95
- Antiqued Brass - $459.95
- $369.00 - Oil
- $329.00 - Electric

Electric Version

- $369.00 – Oil
- $329.00 - Electric

“Dietz” Style Wall Bracket Oil Version

- $127.95

Replacement Tank & Burner

- #2 Burner, 7/8” Wick
- 12-20 Candle Power Output
- 20+ Hour Burn Time
- Custom specifications available
Watchman Signal Lantern

The Watchman "Dead Flame" signal/safety lantern features all galvanized steel construction, an improved 3/8" burner, reinforced cage and a drop out style oil tank. Also available in black with brass trim.

SPECIFICATIONS:
• 12" Height (16" Overall); 6-1/2" Diameter Base
• Average 3 Candle Power, 3/8" Wick; 6 oz. Fount Capacity, 10 Hour Burn Time

Kero Railroad Lantern

We are proud to offer the exclusive WTK "Kero" Railroad Lantern in a beautiful bright nickel plate finish. If this model looks familiar, it’s because it is produced using some of the original tooling for the Adams and Westlake "Kero" model dating back to the 1920's. The oil burning version features a solid brass oil pot, convex burner and a full weight pressed globe. The Deluxe Electric Table Lamp version features a vintage style brown cloth covered cord with line switch and 60 Watt bulb. This lantern will make the perfect gift for any railroad buff.

SPECIFICATIONS:
• Style Introduced in 1925
• 9" Height (15" Overall)
• 6-1/2" Diameter Base
• Average 3 Candle Power
• 5/8" Wick
• 6 oz. Fount Capacity
• 10 Hour Burning Time
• Solid Brass Oil Pot and Burner
• Bright Nickel Plate Finish

Watchman Signal Lantern

The Watchman "Dead Flame" signal/safety lantern features all galvanized steel construction, an improved 3/8" burner, reinforced cage and a drop out style oil tank.

Also available in black with brass trim.

SPECIFICATIONS:
• 12" Height (16" Overall); 6-1/2" Diameter Base
• Average 3 Candle Power, 3/8" Wick; 6 oz. Fount Capacity, 10 Hour Burn Time

Emergency Preparedness Set

Ideal for those who want to be prepared for a natural disaster or power grid failure!

SET INCLUDES:
• Two of our Premium Grade Galvanized 'Champion' Lanterns
• Two 64 oz. Bottles of Medallion Oil
• Good for Indoor or Outdoor use
• One 12" Hooded Reflector
• One Warming Plate
• One 33' Roll of 7/8" Wick
• Two Spare Clear Globes
• Two Handy Funnels

BigRockLanterns.com
A major portion of our business is our custom electric lamp and lantern line. Our experience of over 25 years and pride in workmanship results in a product that not only appears unaltered, but historically correct.

Each electric lantern fixture is built to order, so any practical specification is available. All of the options are offered a-la-carte so that you can order a fixture to fit your exact needs. If you don’t see what you are looking for, just give us a call. To calculate the estimated price per fixture, simply add the prices for the options you want to the price of the oil burning version of the lamp or lantern. Production turn around time usually varies from 24 hours to 4-6 weeks for most orders.

**Steps To Ordering**

After you have chosen the lantern model, follow the steps below, choosing no more than one code from each category on the Electric Fixture Conversion Options page.

1. Choose the Conversion Type from the Options List on the following page. For example, a top wired lantern with a ceiling canopy would be code TC.
2. If a Down Light is desired, add Code D or DF
3. If a Hooded Reflector is desired, add Code HR
4. If Swag Chain is needed, add Code SWAG and the length needed, (i.e. SWAG-3’)
5. Add the Lantern Color, or an optional Finish
6. Add the Code for the Socket Type (the default is standard 120 Volt candelabra or medium base.)
7. If a frosted or sealed globe is desired, add the appropriate code. (Sealed globes are used for Damp or Wet Locations.)
8. If you require UL or CE labeling, add the appropriate code

The code for a Dietz Junior lantern, top wired with a ceiling canopy, 2’ of swag chain, hooded reflector, and frosted globe, UL Listed for a dry location would be listed as:

**JUNIOR-TC-2’SWAG-HR-FG-UL DRY**

**Conversion Notes**

Here are a few notes to help you in selecting the best options for your custom fixtures.

- All candelabra base conversions are supplied with 7/25/40/60 Watt CA-10 flame tip or “G” bulbs.
- All Edison base conversions are supplied with 25/40/60 Watt CA-10 Flame Tip Bulbs, or 100 Watt G-25 or A-19 bulbs.
- Low voltage conversions are supplied with GY6.35 Bi-Pin halogen socket or wedge base socket as specified.
- Frosted globes soften the light, reduce glare and hide the light bulb.
- Swag chain is available in matching finishes by the foot
- The standard wire length for top and side wired lanterns is 6’. Please specify longer length if required.
- Independent (split) wiring is available for down light conversions upon request. Additional charge may apply.
- 220 volt international conversions are available on some Models, (E-14 and E-27 Bases, etc..) We do not supply bulbs for European 220 conversions.
- Light bulbs are included with all 12 and 120 volt fixtures.
- Customized specifications are available on most fixtures.

The flame effect you've unknowingly seen at amusement parks and in motion pictures. The WTK FAUXFLAME® module uses microchip technology to simulate the look of a real flame using any standard light bulb. When used with frosted glass to hide the light bulb, only you will know that you aren't burning kerosene. Dual brightness and flicker controls allow you to obtain the exact flame look you desire. Perfect for use in electrified kerosene or candle lanterns. The optional By-Pass mode allows the user to bring the fixture to full brightness by simply interrupting the power for 1 second. After the lamp is turned off, it will resume the flicker effect the next time it is turned on. The FAUXFLAME® module is designed for professional installation only, and should only be installed by those familiar with electric circuitry and safety.

**Specifications:**
- 110-120 Volts AC, 200 Watt Max.
- 12 Volts AC, 25 Watt Maximum
- 12 Volts DC, 25 Watt Maximum

$299.95

Properly Adjusted Kosmos Burner

Important Note
Oil Lamp and Lantern burners will continue to heat up and become more efficient after lighting. Do not make your final adjustment until after 10 minutes, or a high, sooty flame may result.

HOW TO REPLACE WICK
To replace the wick in a Kosmos burner, first remove the shade and/or chimney and then unscrew the burner from the fount. Discard the old wick. Insert the “corners” of one end of the wick into the wick channel in the bottom of the burner, then “tilt” the wick into place. Rotate the wick adjuster knob clockwise, making sure that both cogs engage the wick simultaneously so that the wick tracks evenly. Before fueling your lamp, trim the wick by burning it DRY until it is consumed evenly to the top of the burner tube. Allow the new wick to completely saturate for 20 minutes before lighting.

FUEL INFORMATION
Oil lamps with Kosmos & Matador burners can use standard clear lamp oil (such as Medallion or Crown Brands,) (Not Paraffin Oil or Ultra-Pure.) They can also be used with Minimum 125° Test Clear Kerosene, or synthetic kerosene, such as Klean-Heat or Clear-Lite.

NOTE: 99% Paraffin Oil (Ultra-Pure, Nowell’s, Tropical Lights, etc.) will not burn properly in oil lamps with a Kosmos or Matador Burner due to their high flash point and viscosity.

WARNING: NEVER USE THE FOLLOWING IN ANY WICK LAMP OR LANTERN OF ANY TYPE:
Gasoline, Coleman Fuel, White Gas, Paint Thinner, (Mineral Spirits,) Wood Alcohol, Naphtha, Turpentine, Benzene, or any other fuel with a Flash Point lower than 125° Fahrenheit, PROPERTY LOSS, SERIOUS INJURY, OR DEATH CAN RESULT.

In 1869, Auguste Gaudard set up his first die stamping shop in the Jura region of France. In 1902, a modern factory was established in Morbier, France with 30 draw presses that were purchased in Brooklyn, New York. The factory has now been in continuous operation under five generations of the Gaudard family. Today, the Gaudard Factory produces some of the finest oil lamps and burners made, using modern machinery with only the best raw materials and strict quality control at every stage of the process. The finishing touches are still done by craftsmen just as it was done over 100 years ago.

Big Rock Lanterns is proud to offer this fine line of Guadard Products

PRINCIPLES OF LANTERN CONSTRUCTION

Most kerosene lanterns embody one of three distinct types of construction: Hot-Blast, Cold Blast or Dead-Flame. Dietz makes all three types to fill every lighting requirement.

**Cold-Blast and Hot-Blast are tubular lanterns.** In them, the kerosene vapor mixed with air, in proper ratio, composes the burning mixture. The burner acts as a carburetor to which the side tubes convey properly controlled air in regulated volume. The result is perfect combustion and bright, clean light.

A cold-blast lantern is the most efficient of lanterns. It is constructed so that only fresh, cold air enters the tubes while the spent air is diverted and expelled.

Hot-blast lanterns permit a portion of spent air to recirculate through the tubes. (Cold-blast provides about twice the brightness of hot-blast.)

**Dead-flame lanterns** take in fresh air through the baffles at the bottom, expel spent air at the top. Hot and cold-blast lanterns produce much more light than the dead-flame type.

AFTER EACH USE - LANTERN OPERATING TIPS

1. Inspect the globe for cracks or chips.
2. Clean the lantern, check for damage.
3. Clean the burner for even burning. Soak burner in white vinegar if necessary
4. Brush char off wick and clean charcoal out of holes in burner around wick holder
5. If lantern is out and there is still fuel in it - check wick length, replace if needed
6. Always use 150 degree kerosene, or regular lamp oil for best results.
7. Never use gasoline, paint thinner, Coleman fuel, or any other explosive oil with a wick.
8. Avoid using colored or tinted oils as they will gum the wick.
9. Paraffin oil should not be used with 7/8" or larger wick due to the difference in viscosity. (Paraffin burns with a 50% reduction in light output.)
Correct maintenance of lanterns will provide lower lighting costs, brighter lighting, long time between fillings, longer lantern life, greater reliability and more certain protection of the public. Follow these simple suggestions...

Removing the Globe on a Cold Blast Lantern:

Grasp the bail and lift ring (as shown). Lift up on the ring and tilt the globe back. Allow the globe to go all the way down. If the globe has LOC-NOBs, rotate the globe a quarter turn and then pull it out from the wire cross guards.

Removing the Burner & Wick:

Turn the burner until the ears are disengaged. Lift out the burner. Keep the wick between your finger and the edge of the fuel compartment (fount) so as to wipe away excess kerosene as you remove the burner from the lantern.

Trimming the Wick:

Cut straight across with a scissor (for either the charred portion of an old wick or the fuzzy part of a new one). A straight wick will burn more evenly and give better light.

Replacing the Burner & Wick:

Put the wick back into the fuel compartment (also known as the fount). Lock the burner back into place making sure it is fitted into both grooves (Use a piece of tape to make a leader to assist in changing the wick if necessary).

Lighting the Lantern:

Push the lift lever straight down. Light the lantern. Set the flame a little lower than desired for burning since the flame will burn higher after the lantern reaches its operating temperature. If the lantern is to be used in freezing weather, light it outside to avoid breaking the globe.

Trouble Free Operating Tips

1. Inspect the globe for cracks or chips.
2. Clean the lantern, check for damage.
3. Clean the burner for even burning. Soak burner in white vinegar if necessary
4. Brush char off wick and clean charcoal out of holes in burner around wick holder
5. If lantern is out and there is still fuel in it - check wick length, replace if needed
6. Always use 150 degree kerosene, or regular lamp oil for best results.
7. Never use gasoline, paint thinner, Coleman fuel, or any other explosive oil with a wick.
8. Avoid using colored or tinted oils as they will gum the wick.

Paraffin oil should not be used with 7/8” or larger wick due to the difference in viscosity. (Paraffin burns with a 50% reduction in light output.)

Approved Fuels for Tubular Lanterns

1. Non-Dyed* (Clear) K1 Kerosene (Outside use only)
2. Synthetic Kerosene (*Clear-Lite)
3. Klean-Heat Kerosene Substitute
4. Standard Clear Lamp Oil (Aladdin, Crown or Medallion)
5. Citronella Oil (Outdoor use only, mix with kerosene 50:50)

Paraffin Oil is NOT designed or suitable for use in tubular lanterns or oil lamps with 5/8” or larger wick.
Paraffin oil has a much higher viscosity and a flash point of 200 degrees, or higher, as compared to the flash point of 150 degrees for kerosene. These differences inhibit the capillary action of the wick and will cause lamps and lanterns with 7/8” or larger wick to burn improperly and erratically.

*Dyed kerosene or lamp oil will eventually clog the wick and inhibit proper operation. It can also permanently stain the lamp or lantern.

WARNING!

NEVER USE gasoline, Coleman fuel, white gas, paint thinner (aka mineral spirits), wood alcohol, naptha, turpentine, benzene or any other explosive fuel in a wick lamp or lantern of any type.

USING ANY OF THE ABOVE FUELS IN A WICK LAMP OR LANTERN CAN RESULT IN PROPERTY LOSS, SERIOUS INJURY OR DEATH.
Our Vintage Style Lighting Works Like Magic to Set a Mood!

CUSTOMER SATISFACTION IS ALWAYS OUR TOP PRIORITY!
